

Cloud CRM System - User Workflow & Journey Maps v1.0

Confidential - Internal Use Only

Version 1.0

1. Lead-to-Customer Conversion

Workflow WF-CRM-001: Lead Qualification and Conversion

Step 1: Lead arrives via web form submission, email parsing, or API import. System auto-creates lead record with source attribution.

Step 2: Deduplication engine checks against existing leads and contacts (match on email, phone, normalized company name). If duplicate found, merge modal shown with field-by-field conflict resolution.

Step 3: AI Lead Scoring calculates initial score (0-100) based on: company size (Clearbit), industry match, title seniority, website engagement (page views, time on site), email opens.

Step 4: Assignment rules evaluate lead: territory (geography), industry vertical, team capacity (round-robin within territory). Lead assigned to sales rep. Notification sent via email and Slack.

Step 5: Sales rep reviews lead in Lead Detail panel. Sees score breakdown, company enrichment data, and any prior interactions. Rep qualifies lead using BANT framework fields (Budget, Authority, Need, Timeline).

Step 6: If qualified, rep clicks 'Convert to Deal'. Conversion wizard: Step A - Create/select Contact, Step B - Create/select Company, Step C - Create Deal (name, value, stage, expected close). Lead status changes to 'Converted'.

Step 7: Deal appears on rep's pipeline board in 'Discovery' stage. Follow-up task auto-created.

Alternate Path AP-1: If lead score < 30 and no engagement in 14 days, auto-moved to 'Nurture' campaign. Marketing automation sends drip emails.

Alternate Path AP-2: If rep marks lead as 'Disqualified', reason captured (not a fit, no budget, competitor, etc.). Lead archived but retained for re-engagement.

2. Deal Pipeline Progression

Workflow WF-CRM-002: Deal Stage Management

Step 1: Deal created in 'Discovery' stage (10% probability). Rep schedules discovery call (CRM auto-suggests best contact time from historical data).

Step 2: After discovery call, rep logs call notes and moves deal to 'Qualification' (25%).

System prompts for BANT fields if incomplete.

Step 3: Rep prepares proposal. 'Proposal' stage (50%). Proposal document uploaded and linked to deal. System sends proposal via integrated email with tracking.

Step 4: Prospect opens proposal (email open tracking). Rep notified via push notification and Slack. Follow-up task auto-created if no response within 48 hours.

Step 5: Negotiation stage (75%). Rep updates deal value if changed. Multiple revisions tracked with version history.

Step 6: Deal closing: Verbal Agreement stage (90%). Rep generates contract from template.

E-signature sent via DocuSign/Adobe Sign integration.

Step 7: Contract signed -> 'Closed Won' (100%). Confetti animation. Slack announcement to team channel. Commission calculated. Deal marked won with close date.

Error Path EP-1: Deal stalls in any stage beyond threshold (configurable, default 30 days).

Aging alert to rep and manager. Deal highlighted red on Kanban board.

Error Path EP-2: Closed Lost -> Rep selects loss reason (price, competitor, timing, no decision, other). Lost deal analysis aggregated in quarterly report.

3. Email Campaign & Follow-up

Workflow WF-CRM-003: Automated Email Sequence

Step 1: Sales rep creates email sequence from template library. Templates include:

Introduction, Follow-up, Case Study, Meeting Request, Break-up Email.

Step 2: Rep selects recipients from lead/contact segment. System validates email addresses and removes bounced/unsubscribed contacts.

Step 3: Sequence configured: delay between emails (1/2/3/5/7 days), send window (business hours only, timezone-aware), reply detection (stop sequence if prospect replies).

Step 4: Sequence launches. Each email personalized with merge fields ({First Name}, {Company}, {Rep Name}, {Rep Calendar Link}).

Step 5: Engagement tracked in real-time: opens (pixel tracking), clicks (link redirect), replies (inbox parsing). Dashboard shows sequence performance funnel.

Step 6: When prospect opens email, rep notified. When prospect clicks link, lead score increases by 5 points. When prospect replies, sequence paused and rep alerted.

Step 7: Sequence completion: unresponsive contacts moved to 'Cold' status. Engaged contacts flagged for personal outreach.

4. Custom Report Creation & Sharing

Workflow WF-CRM-004: Report Builder Flow

Step 1: User navigates to Reports > 'New Report'. Selects primary data source (Deals, Leads, Contacts, Activities).

Step 2: Drag fields from data source panel into Columns, Rows, Filters, and Values zones. Live preview updates with each change.

Step 3: Configure filters: e.g., 'Deal Stage = Closed Won AND Close Date = This Quarter AND Deal Value > \$10,000'. Nested AND/OR groups supported.

Step 4: Select chart type (bar, line, pie, funnel, table). Configure chart options: colors, axis labels, legend position, data labels.

Step 5: Save report with name, description, and folder. Set visibility: Private (only creator), Team (specific team), or Global (all users).

Step 6: Optional: schedule email delivery (daily/weekly/monthly) to recipients as PDF or CSV attachment.
