

Payment Gateway - Checkout & Cart Features Specification

Confidential - Internal Use Only

Version 1.0

1. Hosted Checkout Page

The hosted checkout page provides a PCI-compliant payment form that merchants embed via iframe or redirect.

REQ-ECO-026: Checkout page must load within 2 seconds on 3G connections.

REQ-ECO-027: The form must support auto-fill from browser saved payment methods.

REQ-ECO-028: Real-time card type detection must display the card brand logo as the user types.

REQ-ECO-029: Field validation must show inline errors without page reload.

REQ-ECO-030: Checkout must support saved cards for returning customers (tokenized).

2. Cart Integration API

REQ-ECO-031: Cart API must accept line items with SKU, quantity, unit price, and tax.

REQ-ECO-032: Discount codes and promotional pricing must be validated server-side.

REQ-ECO-033: Shipping cost calculation must integrate with merchant shipping provider APIs.

REQ-ECO-034: Cart abandonment events must be tracked and reported in merchant analytics.

3. Subscription and Recurring Billing

REQ-ECO-035: The system shall support recurring billing with daily, weekly, monthly, and annual cycles.

REQ-ECO-036: Failed recurring payments must trigger retry logic (days 1, 3, 5, 7) before cancellation.

REQ-ECO-037: Customers must receive email notifications 3 days before recurring charge.

REQ-ECO-038: Subscription upgrades and downgrades must prorate billing automatically.

4. Digital Wallet Support

REQ-ECO-039: Integration with Apple Pay, Google Pay, and Samsung Pay for one-tap checkout.

REQ-ECO-040: Wallet transactions must bypass manual card entry for faster conversion.

REQ-ECO-041: PayPal Express Checkout must be available as an alternative payment method.
