

Digital Banking App - User Workflow & Journey Maps v1.0

Confidential - Internal Use Only

Version 1.0

1. New User Onboarding & Account Opening

Workflow WF-FIN-001: Digital Account Opening

Step 1: User downloads app from App Store/Google Play, taps 'Open Account'. Legal disclaimers presented and accepted.

Step 2: User enters: First Name, Last Name, Email, Phone Number, Date of Birth, SSN (last 4 or full), Physical Address.

Step 3: Identity verification via Onfido: User takes selfie and photo of government-issued ID (driver's license or passport). Real-time liveness detection.

Step 4: Onfido returns verification result (pass/fail/manual review). If pass, account provisioned. If fail, manual review queue (24-48 hours).

Step 5: User selects account type: Checking (default), Savings, or Both. Terms and conditions accepted electronically.

Step 6: Virtual debit card generated instantly (card number, expiry, CVV). Displayed in app with 'Add to Apple Pay / Google Pay' option.

Step 7: Initial funding: Link external bank account via Plaid for ACH transfer, or mobile check deposit.

Step 8: Welcome tutorial (3 screens): Balance overview, Quick Actions, Savings Goals. Skippable but shown once.

Alternate Path AP-1: If user is under 18, requires parental co-signer flow with additional identity verification.

Alternate Path AP-2: If ID verification fails, user can re-upload or visit partner branch for in-person verification.

2. P2P Instant Transfer Flow

Workflow WF-FIN-002: Send Money to Contact

Step 1: From home dashboard, user taps 'Send' quick action or navigates to Transfers tab.

Step 2: User selects recipient: search by name, phone, or email. Contacts synced from phone with permission. Recent recipients shown first.

Step 3: User enters transfer amount using numeric keypad. Adds optional memo. System validates against daily transfer limit (\$5000).

Step 4: Confirmation screen displays: recipient name, amount, memo, availability time. If amount > \$500, transaction PIN required in addition to biometric.

Step 5: Backend processes transfer via FedNow (instant) or ACH (same-day). Sender balance debited immediately.

Step 6: Both sender and recipient receive push notification. If recipient is not a NeoBank user, they receive an SMS with link to claim funds.

Step 7: Transaction appears in both users' activity feeds with receipt details.

Error Path EP-1: If insufficient funds, user shown 'Insufficient Funds' modal with option to transfer from savings or cancel.

Error Path EP-2: If recipient's bank does not support FedNow, falls back to ACH with updated delivery estimate.

3. Stock Purchase Flow

Workflow WF-FIN-003: Buy Fractional Stock/ETF

Step 1: User navigates to Invest tab, searches for stock/ETF by ticker or company name.

Real-time price and daily chart displayed.

Step 2: User taps 'Buy'. Selects order type: Market (execute immediately) or Limit (set target price). Enters dollar amount or share quantity.

Step 3: Order review screen shows: shares to be purchased (fractional allowed), estimated cost, any applicable fees (\$0 commission), and projected portfolio impact.

Step 4: User confirms with biometric authentication. Order submitted to brokerage partner (Apex Clearing) via FIX protocol.

Step 5: Execution confirmation received. Portfolio updated in real-time. Push notification sent with fill details and executed price.

Step 6: If market order, executes at next available price. If limit order, enters pending orders queue with expiration (Good-for-Day or Good-till-Cancelled).

Decision Point DP-1: If market is closed, order queued for next market open. User notified of queue position.

4. Bill Split Flow

Workflow WF-FIN-004: Split Bill with Group

Step 1: From transaction details or Transfers tab, user taps 'Split'. Enters total bill amount.

Step 2: User adds participants: select from contacts, or enter phone/email for non-app users. Minimum 2, maximum 20 participants.

Step 3: Split options: Equal split (default), percentage-based, or custom amounts per participant. Tax and tip can be itemized separately.

Step 4: Review screen shows each participant's share. User sends split request. All participants notified via push (app users) or SMS (non-app users).

Step 5: Each participant views their share with original bill context. App users can pay with one tap. Non-app users directed to web payment form.

Step 6: Organizer's dashboard shows real-time payment status per participant. 'Remind' button sends nudge notification to unpaid.

Step 7: When all shares collected, organizer notified. Funds available in organizer's checking account.
