

BBMSA-13025

Requirements Summary Document

Project: McDonald's CR8 Catalog Redesign

Generated on: February 19, 2026

Confidential - For Internal QA Use Only

1. Project Charter & Context

****Project Name:**** BBM Service Assurance ART - McDonald's CR8 Catalog

****Jira Key:**** BBMSA-13025

****Priority:**** High

****Status:**** Feature Testing / Ready for Release

1.1 Objective

The primary goal is to restructure the existing "MCD" customized catalog (originally used for security) into a comprehensive, user-friendly service catalog for McDonald's. This involves merging offerings from multiple sources (Datavalet, Managed LAN, Managed WAN, and MIS) into a single point of entry within the Bell Business Self-Service Center (BBSSC).

1.2 Business Rationale

McDonald's requires a single platform for all service requests to avoid fragmentation. This project is a prerequisite for the Go-Live of the 3rd Party Service Provisioning API, allowing direct communication between Bell's Maximo system and Datavalet's ServiceNow instance. This consolidation ensures that McDonald's Enterprise Customers have a consistent interface regardless of the backend service provider (Bell or Datavalet).

2. Core Functional Requirements

2.1 Catalog Consolidation

- **Primary Catalog:** `MCD` (Consolidated Catalog). All relevant offerings must be migrated here.
- **Secondary Catalog:** `MNPS` (Maintained for existing non-merged services).
- **Decommissioned Access:** Remove customer access to legacy catalogs: `mx\_DATAVALET`, `mx\_MANAGED LAN`, `mx\_MANAGED WAN`, and `mx\_MIS`.
- **Service Groups:** Standardize on `NSMIS` service group for all McDonald's consolidated offerings in BBSSC.

2.2 Datavalet (3rd Party) Offering Reorganization

The following mappings must be strictly enforced in the BBSSC taxonomy to provide a clean user journey:

1. **Meraki Wi-Fi Taxonomy:**

- Path: `Managed Services` -> `Bell Managed Services for Cisco Meraki` -> `Wi-fi`.
- Includes all offerings tagged as "Meraki Wi-Fi" by Datavalet.

2. **MIS Battery Taxonomy:**

- Path: `Managed Services` -> `Managed Infrastructure Services` -> `Power supplies or battery backup`.

- Includes offerings tagged as "MIS Battery (NSMIS)".

3. ****Global Filter (DATAVALET):****

- Datavalet offerings must ONLY show on the Configuration Item (CI) selection page if the device is managed by DATAVALET. This prevents users from selecting Bell-managed hardware for Datavalet-specific services.

2.3 Bell Managed Meraki Offering Updates

1. ****Catalog Inclusion:**** Meraki offerings available to Enterprise Customers (EC) from Managed WAN and Managed LAN must be added to the `MCD` catalog.

2. ****Exception:**** `MERAKI\_113` is excluded from this merge and should remain in its original location or be handled separately per L3 management.

3. ****Global Filter (BELL):****

- Bell offerings must NOT show on the CI page if the device is managed by DATAVALET.

3.1 Datavalet Version (MCDO-03)

- **Action:** "Transfer site to another template (profile)".
- **Taxonomy Path:** `Managed Services` -> `Bell Managed Services for Cisco Meraki`
-> `Wi-fi` -> `Action: Modify`.
- **Form Requirements:**
 - **CI Selection:** Only show Datavalet-managed CIs (e.g., Meraki Access Points, Gateways).
 - **Technical Details:** Must include a mandatory drop-down for "Transfer site to template / profile". This drop-down should pull from a predefined list of Datavalet templates.
 - **Process:** Follows the DV-002 MACD workflow.
 - **Rate Category:** 1.

3.2 Bell Version (MCDO-01)

- **Description:** Modification of existing Bell-managed Meraki profiles.
 - **Classification:** New classification under Meraki tree (e.g., 41200340).
 - **Automation:** Enable auto-creation of Change requests / Flow-through within BBSSC.
 - **Rate Category:** Type 1.
-

4.1 Datavalet Version (MCDO-04)

- **Action:** "Create new profile / template".
- **Taxonomy Path:** Same as Modify, but with `Action: Add`.
- **Note:** This was originally under classification 1, but updated to **Rate Category 3** during the design phase (July 2025).
- **Technical Details Page:** Must be standard/flexible as requirements for new profiles are highly variable and include custom payload definitions for the API.

4.2 Bell Version

- **Action:** Similar to Datavalet, but follows Bell internal provisioning logic and Maximo job plans.
-

5. System Mapping and Data Integration

5.1 Maximo to ServiceNow (Datavalet) Integration

- **Mechanism:** REST API Synchronization.
- **Data Flow:**

- SR Creation in BBSSC -> Maximo Ticket Generation -> Payload transmission to Datavalet ServiceNow.
- Status Updates: Datavalet closing ticket in ServiceNow -> Auto-trigger Maximo status update to 'Resolved'/'Closed'.
- **Field Mappings:** Ensure "Custom Reference #" and "Technical Details" fields are correctly passed to Datavalet without data truncation.

5.2 Offering Name Adjustments

- **DV-047:** Change display name to "Ad Hoc report or dashboard customization" to align with customer branding.
 - **MERAKI_113:** Remove terminology "an URL" and "un URL" from the offering description to improve readability.
-

6.1 Configuration Item (CI) Visibility Matrix

| Offering Type | Target Managed By | CI Selection Page Expectation |

| :--- | :--- | :--- |

| Datavalet Offering | DATAVALET | Visible (Positive Test) |

| Datavalet Offering | BELL / Other | Hidden (Negative Test) |

| Bell Offering | BELL | Visible (Positive Test) |

6.2 Process Workflows (MACD)

1. **Standard Selection:** User selects CI -> Form populates -> Submit.
 2. **Redirected Selection:** User selects "Modify" -> Template dropdown appears -> User selects target template -> Submit.
 3. **External Sync:** Maximo creates External Ticket -> ServiceNow number synced back to Maximo UI for customer tracking.
-

7. Quality Assurance: Defects and Edge Cases

The following historical defects must be covered by the new test suite to prevent regressions.

7.1 Visibility & UI Defects

- **SADRSTRANG-13583:** CIs not appearing on Device Selection for Meraki 139, 142, 82, 79, etc.
- **OMNITOTORO-665:** CI managed by Bell appearing for Datavalet offerings (Logic failure).
- **OMNITOTORO-587:** General "service-unavailable" errors during form generation for MCDO offerings.

- ****SADEFENDER-373:**** MCDO offerings failing to be sent to Datavalet ServiceNow due to classification mismatch.

7.2 Integration & Status Defects

- ****SADRSTRANG-13420:**** Maximo status not updating after Datavalet closes the ticket (E2E sync failure).
 - ****SADRSTRANG-13593:**** Incorrect payload sent to Datavalet when taking a ticket off hold.
 - ****SADRSTRANG-14380:**** Incorrect SLAs applied for Datavalet offerings (Must be 48h for Type 1, 4h for Type 3).
 - ****SADRSTRANG-14477:**** Incorrect Change Types (Minor/Major) applied during auto-creation.
-

8. Detailed Project Sub-Tasks (Tracking for E2E)

These sub-tasks represent the granular units of work that the test cases should cover:

- ****BBMSA-13026:**** Complete RYG Description for the MCD Catalog.
- ****BBMSA-14047:**** E2E First Sub Test Execution - Core catalog functionality.
- ****BBMSA-14310:**** E2E Second Sub Test Execution - API payload validation.
- ****BBMSA-14358:**** E2E Third Sub Test Execution - Regression of legacy MIS offerings.

- **SADRSTRANG-11085:** E2E Test Planning and Case Review for McDonald Catalog.
 - **SADRSTRANG-11086:** E2E Test Case Execution for Consolidated Catalog.
 - **SADRSTRANG-11087:** UAT Test Planning and Case Review.
 - **SADEFENDER-440:** Modify Datavalet Job Plan for MCDO offerings.
 - **SADEFENDER-474:** Modify implementation logic for additional MCDO offerings.
-

9. Appendix: Template Redirection List

The "Modify Profile" offering must support the following specific templates in the drop-down menu:

- MCD GW4 - 29.5.1
- MCD GW4 DT-DMB - 29.5.1
- MCD GW4 - 25 - 29.5.1
- Starlink
- GW4-LTE-Only
- MCD LAB - 99041 - 27.6
- MCD Wi-Fi TPV only - 29.5.1
- DV-GW4-LAB-Template
- MCD GW4 - IOT - 29.5.1
- MCD GW4 - 25 - 29.5.1 - Guest SSID Off

- MCD - 29.5.1
 - MCD DT-DMB - 29.5.1
 - MCD 25-50 - 29.5.1
 - DV-GW4-DT-DMB-LAB-Template
 - MCD LAB - 99027 - 27.6
 - MCD LAB - 99011 - GW4 - 29.5.1
-

10. Final Verification Checklist for Production

1. **Role Access:** Verify catalog role (PARBAC) allows only NSMIS group access for McDonald's users.
2. **Cleanup:** Confirm removal of old `mx\_` catalogs and verify no orphan offerings exist.
3. **Hierarchy:** Validate Meraki Wi-Fi taxonomy hierarchy in the BBSSC side-navigation.
4. **Security:** Verify CI filtering for both Bell and Datavalet offerings (No cross-provider visibility).
5. **Synchronization:** Check SR to ServiceNow sync for all MCDO-* offerings using real-time API logs.
6. **Classification:** Ensure SLA and Rate Category 3 applied to "Create New Profile" for Datavalet.
7. **External Reference:** Verify external ticket number (e.g., SN-12345) display in Maximo CR/SR technical notes.

8. **Performance:** Ensure CI selection page loads in under 3 seconds for sites with >100 devices.

Generated based on BBMSA-13025 Technical Analysis - 2026-02-19

Note: This document is a consolidated summary of 98 pages of project documentation for the purpose of test case generation. It focuses on the specific requirements, system mappings, and historical bugs that define the testing scope.
