Target start:	Wed Feb 25 00:00:00 EST 2026
Target end:	Tue Mar 10 00:00:00 EDT 2026
Enabler:	
Benefit Hypothesis:	By providing a consolidated view of the most recent wireless orders and a direct link to the shopping portal, this widget streamlines the customer's procurement and order tracking workflow. It offers immediate visibility into order status and reduces the steps required to initiate new purchases, creating a more cohesive and efficient user experience.
Acceptance Criteria:	Widget Visibility & Layout 1. GIVEN a user has the required "shopping" permission and to to access the Dashboard (as defined in BBMOMNI-4840), WHEN they view the Wireless Dashboard, THEN the "Shopping and Orders" widget is visible. (Tied to entitlement: prbc_ec-requestOrdering-manage) 2. GIVEN a user lacks the "shopping" permission or to access the dashboard, WHEN they view the Wireless Dashboard, THEN the "Shopping and Orders" widget is not visible.

3. GIVEN the widget is visible, THEN it contains a "Shop now" button positioned in the top right corner.
4. GIVEN the widget is visible, THEN it contains a "Latest Orders" table below the widget title.

"Shop now" Button Behavior

1. WHEN the "Shop now" button is clicked, THEN the user is redirected to <https://shop.enterprisecentre.bell.ca/devices> in a new browser tab, in the same language

"Latest Orders" Table Content & Logic

1. GIVEN the "Latest Orders" table is displayed, THEN it shows a maximum of 5 orders.
2. GIVEN orders are displayed, THEN they are the most recent orders for the selected NAG, sorted by creation date in descending order.
3. GIVEN orders are displayed, THEN they are correctly filtered to show only orders for "Mobile devices and Plans" service.
4. GIVEN the table is displayed, THEN it includes the following columns: "Request ID", "Submission date", and "Status".
5. GIVEN the "Status" column is displayed, THEN the status badges (tags) use the standardized colors defined by the UX team.
6. GIVEN a "Request ID" is displayed in the table, THEN it is a clickable link and is visually underlined to indicate this.
7. WHEN a user clicks an "Request ID" link, THEN they are redirected to that specific order's detail page within eOrdering, which opens in a new browser tab.
8. GIVEN the "Latest Orders" table is displayed, THEN a "View all orders" link is visible below the table.
9. WHEN the "View all orders" link is clicked, THEN the user is redirected to the "My Request" page.
10. GIVEN the user is redirected to the "My Request" page from the "View all orders" link, THEN the page is pre-filtered to show only orders for "Mobile devices and Plans" service.

Seed Stories:

Story 1 (Visibility & Quick Shopping): As a user with shopping permissions, I want to see a "Shopping and Orders" widget with a "Shop now" button, so I can quickly track recent orders and start a new purchase from my dashboard.

Story 2 (Order Summary): As an account manager, I want the widget to show me my 5 most recent wireless orders at a glance, so I can stay updated on procurement activity without having to search.

Story 3 (Order Details): As a user, I want to be able to click on any Order ID in the list and be taken directly to its details page in eOrdering, so I can investigate a specific order without manual navigation.

Story 4 (Complete Order History): As an account manager, if the order I'm looking for isn't in the top 5, I want a "View all orders" link that takes me to a complete, pre-filtered list of all my wireless orders, so I don't have to manually navigate and filter the list myself.

This feature introduces the "Shopping and Orders" widget to the Wireless Dashboard. **The visibility of this entire widget is dependent on the user having the appropriate shopping permissions (defined in [BBMOMNI-4840](#)).**

For authorized users, the widget provides two key functions. First, it contains a "Latest Orders" table that displays a real-time summary of the five most recent wireless-related orders (for "Mobile devices and Plans") sourced from the "My Request" section. Each Order ID in the table is a direct link to the order's detail page in eOrdering.

Second, the widget includes a prominent "Shop now" button that provides a one-click shortcut for users to access the shopping portal and initiate new purchases.

Mockups (from UX):

Please refer to the approved UX designs in Figma for the visual layout, component styling, and interaction flows for this widget.

- **Main Design Link:** [Play-To-Win-1A Figma](#)
 - The UX team will define and standardize the color codes used for the status tags (e.g., In-progress, Completed) to ensure visual consistency across the platform Done
- **ERD (content and translation):** [ERD_P2W_v1_OB.docx](#)

Technical Information (from SA):

(To be completed by the System Architect)

Other Documentation:

- **Permissions Dependency:** The visibility of this widget is governed by the user's ability to shop and access the dashboard, as defined in the entitlements feature: [BBMOMNI-4840 - Permissions and Entitlements](#)
- **Data Source:** Order data will be pulled from the existing "My Request" table and must be filtered to show only orders related to wireless services ("Mobile devices and Plans").
- For a complete list of detailed requirements, please consult the "dashboard requirements excel file" located within the main program epic.
