Target end:	Tue Mar 10 00:00:00 EDT 2026
Enabler:	
Benefit Hypothesis:	This feature provides customers with a powerful visual tool to understand their wireless usage, from a high-level 14-month trend down to individual subscriber details. This empowers customers to analyze historical data, identify drivers of overage and roaming, and make informed decisions about their plans. The intuitive drill-down capability creates a strong self-serve experience, reducing customer confusion and the need to contact support agents for usage inquiries.
Acceptance Criteria:	Widget Visibility 1. GIVEN a user has the required "My dashboard" permission AND "Usage Information" (as defined in BBMOMNI-4840), WHEN they view the Wireless Dashboard, THEN the "Usage Summary and Details" widget is visible.

2. GIVEN a user lacks either the "My dashboard" permission **OR** the "Usage Information" (as defined in [BBMOMNI-4840](#)), WHEN they view the Wireless Dashboard, THEN the "Usage Summary and Details" widget is **not** visible.

Main View & Bar Chart (Ref: PTWPH1-5, PTWPH1-7)

1. GIVEN the Usage widget is visible, THEN four usage tabs are displayed: "Data", "Voice", "Long Distance", and "SMS".
2. GIVEN the user lands on the dashboard, THEN the "Data" tab is selected by default.
3. GIVEN a user selects a usage tab (e.g., "Voice"), WHEN they navigate away and return to the dashboard, THEN the "Voice" tab remains selected.
4. GIVEN a usage tab is selected, THEN a bar chart displays usage data for the last 14 months (13 billed, 1 current/unbilled).
5. GIVEN the bar chart is displayed, THEN each bar visually distinguishes between In-plan, Overage, and Roaming usage using the **standardized colors defined by the UX team**, with a corresponding legend.
6. WHEN a user hovers over a bar, THEN a tooltip appears showing the specific usage values for In-plan, Overage, and Roaming for that month/billing period.
7. GIVEN a user has been active for less than 14 months, THEN the chart only displays bars for the months/billing periods where data exists.

Drill-Down View - Level 1 (Ref: PTWPH1-8, PTWPH1-9, PTWPH1-10, PTWPH1-11)

1. GIVEN the main bar chart is visible, THEN a static text prompt "Click on graph bar to show details" is displayed below it.
2. WHEN a user clicks on a month's bar, THEN the bar chart view collapses and is replaced by a drill-down view with a header reflecting the selected month or billing period.
3. GIVEN the drill-down view is active, THEN it contains two summary tables: "Shared Plans Usage Breakdown" and "Individual Plans Usage Breakdown".
4. GIVEN the summary tables are displayed, THEN the data within them accurately reflects the usage for the selected month/billing period, broken down by In-plan, Overage, and Roaming. The counts in the tables must be clickable links.

Drill-Down View - Unbilled Month & Donut Wheels (Ref: PTWPH1-12)

1. GIVEN the user clicks the bar for the **current unbilled month**, THEN the drill-down view also includes two "In-plan Usage Threshold" sections, one for Shared Plans and one for Individual Plans.
2. GIVEN the threshold section is visible, THEN it contains a "Donut Wheel" visual and an adjacent table, showing the number of plans/subscribers within each threshold (<75%, 75-95%, 95%+).
3. GIVEN the user clicks the bar for any **billed (previous) month**, THEN the "In-plan Usage Threshold" sections and Donut Wheels are **not** displayed.

Drill-Down View - Level 2 (Ref: PTWPH1-14, PTWPH1-15)

1. WHEN a user clicks a link in the "Shared Plans Usage Breakdown" table, THEN they are navigated to a detailed "Shareplans Detail Table".
2. GIVEN the "Shareplans Detail Table" is visible, THEN it displays the correct columns (Billing Account, Plan Name, # of Subscribers, Allowance, Used, Overage) and is paginated if there are more than 10 entries.
3. WHEN a user clicks a link in the "Individual Plans Usage Breakdown" table, THEN they are navigated to a detailed "Individual Plans Detail Table".
4. GIVEN the "Individual Plans Detail Table" is visible, THEN it displays the correct columns (Number (MDN), Name, Billing Account, Allowance, Used, Overage) and is paginated if there are more than 10 entries.

Global Functionality (Ref: PTWPH1-1, PTWPH1-13, PTWPH1-16)

1. GIVEN any view of the usage widget, THEN an "Export" button is available.
2. WHEN the user clicks "Export", THEN they are presented with options to download the visible data/graph in standard formats

3. GIVEN the user is in any drill-down view (Level 1 or Level 2), THEN a "Back" button is visible.
4. WHEN the "Back" button is clicked from a Level 2 detail table, THEN the user is returned to the Level 1 summary drill-down view.
5. WHEN the "Back" button is clicked from the Level 1 summary drill-down view, THEN the user is returned to the main 14-month bar chart view.

Seed Stories:

Story 1 (Main View): As an account manager, I want to see a 14-month usage chart and easily switch between Data, Voice, SMS, and LD, so I can quickly identify historical trends and anomalies.

Story 2 (Initial Drill-Down): As a user, I want to click on a specific month's bar to see a high-level summary of Shared vs. Individual plan usage, so I can understand the primary structure of my usage for that period.

Story 3 (Unbilled Proactive Management): As an administrator analyzing the current month, I want to see "donut wheel" visuals showing which plans are approaching their limits, so I can proactively manage potential overages.

Story 4 (Detailed Investigation): As an administrator, I want to click further into the summaries to see a detailed, paginated list of specific plans or subscribers with their exact usage numbers, so I can pinpoint the precise sources of high usage or overage.

Story 5 (Navigation & Export): As a user, I want to have seamless "Back" button navigation to move between views and the ability to export the data I'm seeing, so I can analyze it offline or keep it for my records.

This feature introduces the main interactive usage widget for the Wireless Dashboard. It provides a multi-layered experience for customers to analyze their account's usage.

The top-level view allows users to toggle between **Data, Voice, SMS, and Long Distance** usage types. It displays a 14-month historical bar chart (13 billed months + 1 current/unbilled month) showing usage categorized as In-plan, Overage, and Roaming.

The core functionality is the drill-down capability. Clicking a bar on the chart reveals a summary breakdown of usage into **Shared Plans** and **Individual Plans** for that specific month. For the current (unbilled) month, this view is enhanced with **"Donut wheel" visuals** that highlight in-plan usage thresholds (<75%, 75-95%, 95%+).

Users can click further into these summaries to see detailed, paginated tables of the specific share groups or individual subscribers contributing to the usage. Navigation is supported by 'Back' buttons to return to previous views. An **Export** function is also included, allowing users to download graph data and tables for their records.

Mockups (from UX):

Please refer to the approved UX designs in Figma for the visual layout, styling, and placement of the usage summary tabs, bar chart, drill-down tables, donut chart, and export options. Key mockups to reference include pagination examples and empty state handling.

 - **Pagination examples:** <https://www.figma.com/design/fGHVxp36VHZSTbr9W3zPAx/Play-To-Win-1A?node-id=4089-19524&t=8Zr3p82tyxNxKQ9L-1>
 - **Empty State examples:** <https://www.figma.com/design/design/fGHVxp36VHZSTbr9W3zPAx/Play-To-Win-1A?node-id=4304-22111&t=8Zr3p82tyxNxKQ9L-1>
- **ERD** (content and translation): [ERD_P2W_v1_OB.docx](#)
- For a complete list of detailed requirements, please consult the "dashboard requirements excel file" located within the main program epic.
- **Confirmed:** The UX team will define and standardize the color codes for In-plan, Overage, and Roaming usage. This standard will apply to both this new dashboard widget and the existing 'My Inventory' section to ensure visual consistency across the platform. A separate feature will be created to align the colors within the 'My inventory section / usage details'
- **Confirmed:** Can the bar chart X-axis and drill-down headers display the specific billing period dates (e.g., "Mar 15 - Apr 14") instead of just the month name ("April")? This is preferred for accuracy as billing cycles can overlap months.
 - Billing period is the same every month (ex: 21st to 20). Should add a reference in graph
- **Confirmed:** we should display the year
- **TBC:** UX and Product to confirm GB vs TB display rules and the handling of decimals. Same applies for all other tabs. Conversion must be done
- Export format for tables will leverage the existing format in BBSSC. UX to provide specific designs for graph exports

Technical Information (from SA):

(To be completed by the System Architect)
